Art Unit: 1652

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-45, 47, 54, and 60-64, drawn to synthetic nucleic acids and vectors comprising said nucleic acid, classified in class 435, subclass 320.1.
- II. Claim 46, drawn to synthetic polypeptides, classified in class 435, subclass 189.
- III. Claims 48-53, 55-59 and 65-66, drawn to methods of preparing a synthetic nucleic acid, classified in class 435, subclass 440

The inventions are distinct, each from the other because of the following reasons:

The DNA of Group I and the proteins of Group II are patentably distinct compounds because they are chemically different, the DNA has other utility besides encoding the proteins such as a hybridization probe and the proteins can be made by another method such as chemical synthesis.

Inventions III and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially

Art Unit: 1652

different process (MPEP § 806.05(f)). In the instant case the product can be made by chemical synthesis.

The proteins of Group II are unrelated to the method of Group III as they are neither used nor made by the method of Groups III.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter as shown by their different classification, restriction for examination purposes as indicated is proper.

Group I is generic to a plurality of disclosed patentably distinct species comprising distinct synthetic polynucleotides including those recited in Claims 17-19. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1652

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
